Carrier Airborne Early Warning Squadron One Hundred Twenty is the Fleet Replacement Squadron of Carrier Airborne Early Warning Wing Twelve. It is our primary duty to indoctrinate and train Naval Aviators, Naval Flight Officers, Flight Aircrew, and maintenance personnel in operating and maintaining the E-2C "Hawkeye" and reprocurd C-2A "Greyhound" aircraft.

During 1988, the MEDRIP program was created and implemented on the Aviation Training Support System (ATSS) computer. This platform vastly

Enclosure (1)

increased medical readiness. In December, ATSS acquired a long awaited 24 X 60 foot relocatable facility to install stored upgraded equipment and increase work space. The trailer has been installed behind the original ATSS spaces in building SP-367 and will be occupied in April 1989.

The new Fleet Replacement Aviation Maintenance Program (FRAMP) building was dedicated 15 April 1988. It provides 8,500 square feet of training space in preparation for "Dual Site" training to commence 1992. Relocation of the FRAMP Department was smoothly completed in May with no impact on training.

FRAMP graduated 157 students in FY-88 in non-designated airmen (NDA), E-2C electrical and instrument practical job training (PJT), avionics PJT, and C-2A(R) loadmaster and plane captain courses. Student loading was lighter than previous years due to detailers ordering NDA's directly to the squadrons. FRAMP initiated action through Wing-12 to ensure that squadrons send NDA's to FRAMP after check-in for training track scheduling and recommendation to appropriate NEC.

NAVAIR (PMA 205-31G) approved the design and funding on 15 November 1988 for conversion of a SLEP C-2 (obtained December 1987) into Aft Structure Trainer (AST) number 2. Design review meetings will be held in March and July 1989 with installation and testing scheduled to commence April-July 1989. Utilization of this trainer, when completed, will greatly improve the quality and efficiency of FRAMP training by providing a complete aircraft for practical job training, loadmaster training and training on aircraft systems without the need to impact squadron operational commitments.

E-2C electrical and instrument training track (D-602-0350) was temporarily deactivated on the east coast during the last quarter FY-88 pending procurement of training devices for Organization Maintenance Training (C-602-3479) taught at NAMTRAGRUDET 1026 in Norfolk. Funding and acquisition of trainers is not expected until FY-92.

The Operations Department provided the scheduling and coordination that enabled 35 pilots, 38 NFO's, and 18 flight technicians to complete the E-2C/C-2A(R) syllabus. The NFO's and flight technicians also received their wings while onboard VAW-120.

During calendar year 1988, the squadron flew 491 hours without a Class A or B mishap. Many of these hours occurred during the preparation and execution of five carrier qualifications which took place aboard the USS AMERICA (CV-66), USS CORAL SEA (CV-43) and USS THEODORE ROOSEVELT (CVN-71).

The Training Development and Pilot/NFO Training offices implemented three new projects in the course of calendar year 1988. The CAT I-V syllabi was completely rewritten, which effectively standardized east and west coast operations and training. In addition to this, the developmental stages for Interactive Courseware/Computer Based Instruction programs for Replacement Pilots and NFO's were completed. Lastly, the Training Development Division was able to lay the ground work to acquire dedicated jamming services for Replacement NFO training flights.

The Operations Department developed and presented VIP orientation briefings and aircraft indoctrination tours for visiting foreign dignitaries.

Routinely VAW-120 is tasked with providing briefings for visiting groups such as NROTC and NJROTC Units and Naval Sea Cadets. Those briefings are designed to orient prospective Naval officers and enlisted personnel to the capabilities and mission of the E-2C Hawkeye and the C-2A(R) Greyhound.

As of October 1988, VAW-120 exceeded three years of mishap-free flying with a total combined E-2C/C-2A(R) flight time of 14691 hours. This achievement was made possible by the high degree of professionalism exhibited by all of the squadron members.

The following areas were covered by VAW-120's Retention Program during FY:88

Obtained an overall retention percentage of 77%. VAW-120's personnel have reenlisted in the CO's office, the Chief's Mess, in Washington, D.C and onboard an airborne C-2.

Our Command Career Counselor made detailer trips monthly to coordinate special requests and orders.
