Part 3. Narrative

Written Summary:

In January, the ship conducted one day VIP cruises out of Cape Canaveral, FL. These cruises were for the Nuclear Regulatory Commission, and the advisory committee of the Nuclear Regulatory Commission. This event was followed by testing and evaluation of a new towed array (TB-29A) and new tactics (SWET).

During the months of April and May, PHILADELPHIA conducted a dual-media discharge in Norfolk, Virginia. Originally scheduled to be performed in Groton, this maintenance moved to Norfolk due to the unavailability of a dry-dock in Groton. Completing the job approximately one week ahead of schedule, this was a very successful maintenance period.

In June, the ship conducted a Tactical Readiness Evaluation (TRE) and received a grade of Above Average. The TRE was followed by testing and evaluation of new torpedo variants. After the evaluation, the ship transited to the liberty port of Halifax, Canada.

After liberty in Halifax, the ship trained for a Operational Reactor Safeguards Examination (ORSE). The ship received a grade of Average. After ORSE, the ship went into a Selected Restrictive Availability (SRA) performed by Portsmouth Naval Shipyard. The SRA was conducted in Groton, in the SHIPPINGPORT dry-dock..

A. Statistical Summary:
